

ALL-NEW JOY WOMEN'S SKI SERIES

It's "Super" Easy to Find Your Perfect Balance

The Joy ski collection makes every skiing day a pleasure. The super lightweight ski from HEAD has been one of the strongest women's ski collections for the past six years with elegant designs and high-end performance. Both beginners and experts are able to find the perfect balance and control with JOY, on the slopes and in deep snow. The series has a range of models from beginner to advance. Now, for the first time, the Joy series uses LTY TECH. Thanks to the lightest and strongest materials in the world, the weight and complexity of the skis have been reduced to only that which is necessary.

The new Joy series uses a special light Karuba wood core in combination with carbon that runs the full length of the skis. HEAD engineers have created the perfect balance in a women's ski by utilizing the lightest materials possible without compromising performance. In addition to Lyt Tech, the Joy series continues to improve with technologies such as ERA 3.0 for easier handling, control and an instant grip on icy slopes.

Incredibly Light, More Balance, Unmatched Control

Thanks to Karuba, carbon and Graphene layers inside the ski, the weight of the Joy series has been reduced to a minimum. The unique material mix in the construction makes it possible to make the core thinner in the middle and thicker at the tip and tail. Therefore, the weight is redistributed and the ski flexes in a way that provides more balance. Through the development and refinement of control features such as Women Camber and ERA 3.0, Rocker Radius and Rebound, the Joy series provides effortless turning and steering, providing direct edge grip, less vibration and incredible stability.

The 2019 – 2020 Joy Range

Super Joy

The Super JOY with its unique superlight construction is the perfect choice for ladies who are confident and sporty skiers.

Epic Joy

With a weight of approximately 2,000 grams, including plate and binding, the Epic Joy is the lightest high-performance ski in the world. This ski is recommended for experience to expert skiers.

Absolut Joy

The Absolut Joy is an all-round ski for intermediate skiers. The wood core provides even more power. This ski is recommended for women who want to make progress quickly.

Total Joy

The Total JOY is the perfect combination of lightweight, stability and balance. This ski is recommended for experienced skiers who like to ski on and off the slopes.

EDGE LYT A Boot with Perfect Balance

HEAD's LYT ski boot series is constantly innovating and providing better skiing experiences with less effort. The latest development is the EDGE LYT ski boot series, which ensures a perfect balance between performance, comfort, and lightness.

LYT TECH is a completely new design concept for ski boots. For the first time ever, Graphene has been injected into the shell. The new Smart Frame design is a lightweight shell that has more dynamic rebound and enhances the power and performance of any all-mountain skier.

Skiing becomes even easier with LYT TECH's naturally centered and balanced stance. From this optimal position, the flexing of the boot has been simplified, making it easier to be precise with skiing moments. By using the latest materials and shapes, the weight of the ski boot has been reduced by approximately 20%, with 30% more power transmission and 40% more restoring force. The direct contact between the tongue and the shell of the shoe allows a direct transfer of energy of the skier to the ski. With a small forward flex of 5°, skiers transfer enormous power to the ski and feel safe thanks to the progressive flex.

HI-TOP TECH shell, LIQUID FIT, FORM FIT and PEFECT FIT

With the EDGE LYT ski boots, getting in and out has never been easier. This is ensured by the newly developed upper cuff and the lever effect of the HI-TOP TECH shell. HI-TOP TECH keeps the tongue of the shoe in the optimum position, ensuring comfort when taking the boot on and off.

The EDGE LYT ski boots feature LIQUID FIT, the most versatile, comfortable, and high performance shoe adjustment system HEAD has ever developed. The FORM FIT plastic formulas provide excellent support and comfort with improved balance and control. PEFECT FIT is the most revolutionary system when it comes to the comfortable and performance-oriented adaptation of HEAD ski boots.

KORE W #ToTheKore Uniquely Designed for Freeriding Women

Freeriding for women is finally at its best! The Kore W has evolved from HEAD's original Kore freeride skis with a new innovative chapter. Kore W is a super light ski that is uniquely designed for women. This ski is recommended for ambitious to entry-level freeriders.

With the Kore W, we have stripped down all unnecessary materials and only the essentials remain: the core. The revolutionary construction of the Kore omits the standard finish and simply uses the underlying lightweight polyester fleece as the top surface. This topless tech construction results in the lightest ski in its category. The tri-axial carbon lining provides additional torsional stiffness for quick response and a fabulous edge grip.

Only the Finest Materials in the Kore W: Graphene, Koroyd and Karuba

The Kore W uses outstanding, innovative materials. Graphene is the strongest and lightest material currently known to man. And HEAD engineers use it in the Kore W in the tips and tails, making the ski lighter and more responsive in deep snow. Koroyd is a honeycomb material in the heart of the KORE W that is light, elastic, strong and flexible. The Karuba wood core gives the ski even more lightness and a special personality. The perfect ratio of density and weight ensures the ease and balance of Kore W. The unique advantage to using Karuba, Koroyd and the Graphene is of course optimizing weight distribution and balance to create the lowest possible weight.

The 2019 – 2020 Kore W Models

KORE 99W

Perfect buoyancy in the powder. A lightweight ski uniquely designed for women who like powder filled freeriding.

KORE 93 W

This easy-to turn ski provides effortless fun for your first powder adventures, and will leave you craving for more.

LIQUID FIT

Perfect Boot Customization in Less than Ten Minutes

LIQUID FIT is the most versatile, comfortable and powerful adjustment system HEAD has ever developed. The LIQUID FIT material offers a precise and fast individual adjustment. It gives a perfect fit to the most important parts of the ski boot - in the ankle and in the heel area. LIQUID FIT ensures the performance and precision of a Foam Liner and can be fitted in just under ten minutes.

With LIQUID FIT, material can be added or removed at any time. The non-compressible material is perfect for an individual and comfortable fit. The material density improves the heel closure, resulting in a higher performance.
